Now we convert the list of dictionaries into a DataFrame
got_df = pd.DataFrame(got_data)

Let's also make sure that the 'Original_air_date' column is a datetime type.
got_df['Original_air_date'] = pd.to_datetime(got_df['Original_air_date'])

Now 'got_df' is available as a variable containing all the episodes' data.
got_df.info() # Show the DataFrame info to confirm its structure
got_df.head() # Show the first few rows as a quick check
got_df.describe()[['US_viewers_millions']]
